DOCKET # 98-153

Re: Ultra Wideband  
ET Docket 98-153

Dear Ms. Salas:

I am writing to you in response to the FCC's Notice of Proposed Rule Making on ultra-wideband radio.

I am retired now having been involved in the founding of three separate businesses. I was in the automobile business, the consulting business and the computer business. As a result, I know something of several different businesses. Also, as a result, it seems to me that ultra-wideband technology will open new fields and much broader communication possibilities.

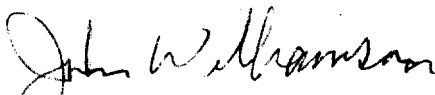

May I list for you some of the benefits of time modulated ultra-wideband – they are as follows:

- A technology with remarkable potential
- The enormous potential for the public to benefit from the UWB technology
- UWB technology can create numerous public safety benefits
- UWB technology can create entirely new services to save lives and benefit consumers
- UWB can bring entirely new, cost-effective, telecommunications services to consumers
- UWB can help wire schools cheaply without disrupting the learning environment

With all of these advantages, it seems to me that you should act rapidly to the proposed rule making on ultra-wideband technology.

I appreciate your consideration of this request and wish your good judgment would prevail right away. Thank you and best regards.

Sincerely,

  
John Williamson  
JAW/mbd
